

Homework 9
CS 152 – Dr. Shaffer
Due: April 6, 2004

You are to produce a Java application which graphs the frequency of occurrence of each value returned by the `nextPoisson()` method in the `Random` class provided in your text. The graph should be in bar-chart format and should be scaled reasonably to fit in the window you create. It should include axes (which may or may not have tic marks on them, that's up to you).

Possible extensions include having the graph build up in steps...a simple animation of sorts.
